

Series P78

Dual Pressure Controls for Refrigeration, Air-conditioning and Heatpump Applications

Introuction

These dual pressure controls are designed for use in a variety of applications involving refrigeration high or low pressure. Models supplied have a "whole range" design, enabling them to be used with refrigerants R22, R134A, R404A and all other non-corrosive refrigerants which are within the operating range of the control. They may also be used for other high or low pressure applications such as air, water etc. Models which can be used with ammonia as well as controls tested, conforming to DIN 32733, and approved by TÜV are included in the program.

P78 Dual Pressure Control for Refrigeration

Description

The P78 series pressure controls may be used for control functions or limit functions, depending on model number. All models are provided with alarm contacts (except P78ALA). All standard models have phosphor bronze bellows and brass pressure connections. Models for use with ammonia are provided with stainless steel bellows and connectors. Devices conforming to DIN 32733 have a double bellows on the high pressure versions. Their IP54 classification means that these pressure controls are suitable for almost all applications.

Feature and Benefits	
<input type="checkbox"/> Generous wiring space	Easy wiring and maintenance
<input type="checkbox"/> Splash-proof enclosure (IP54)	Can be used for indoor/outdoor applications
<input type="checkbox"/> Trip-free manual reset	Override is not possible in the control function
<input type="checkbox"/> Patented separate alarm contacts for both low pressure and high pressure cut-out (except P78ALA)	Easy monitoring of the fault location

Note

These controls are designed for use only as operating controls. Where an operating control failure would result in personal injury or loss of property it is the responsibility of the installer to add devices or systems that protect against, or warn of, control failure.

Note

To facilitate order handling special ordering codes have been added to some commonly used models

Type number matrix

- P78LCA Automatic reset both sides
- P78MCA Automatic reset low side manual reset high side
- P78PGA Manual reset both side
- P78LCW Automatic reset both sides conform DIN32733
- P78MCB Automatic reset low side manual reset high side conform DIN32733
- P78MCS Automatic reset low side manual reset high side conform DIN32733
- P78PLM 2 x manual rest HP conform DIN32733
- P78ALA Dual fan cycling control (2 x SPST close high)

Adjustment

On most models the range scale indicates the high switch point (exception: LP side of P78PGA, here the range scale indicates the low switching point). To obtain low switch point deduct differential value from the high switch point.

Repair and replacement

Repair is not possible. In case of an improperly functioning control, please check with your nearest supplier. When contacting the supplier for a replacement you should state the type/model number of the control. This number can be found on the data plate or cover label.

Contact functions

(see also "Type Number Selection" table)

- LP.** A - C opens on pressure decrease
