

New room thermostat CH115: 3 times special

Here it comes, finally: after the success gained by CH110, already appreciated for its modern and sophisticated design, here is the new room thermostat CH115, with the whole benefits of its forerunner and, in addition, a wider installation versatility.

In fact, it can be installed on the wall, or flush mounted on rectangular 3-modules boxes (503) or in round boxes in compliance with the European Standards. New dimensions will not imply any sacrifice on the aesthetic level: CH115 keeps CH110 and CH150 winning design, awarded with the Comfort & Design Prize in 2006.

Three modules and three selectable temperature levels: COMFORT (from 2° to 40°C), ECONOMY (from 2° to 40°C) and ANTIFREEZE (from 0° to 7°C). Its operation is really intuitive: once the temperature is set by its 4 easy keys and a very clear graphic, a touch is enough to switch from the daily mode to the night one. One more plus: battery life is enhanced from 2 years to more than 4.

A radiofrequency version is also available in order to make it easier and quicker to install. Stylish, versatile and user-friendly: three valid reasons for choosing CH115.
