PolyGard[®] Digital Gas Controller DGC-05 RS-485 Bus

DESCRIPTION

Gas measuring controller series for continuous monitoring and warning of toxic, combustible and refrigerant gases and vapours.

The gas controller series DGC-05 can monitor up to 98 digital gas transmitters of the DT-05 series via RS-485 bus, or 48 digital transmitters DT-05 with in each case one transmitter of the AT series. For each transmitter five free alarm thresholds are adjustable. For the alarms up to 30 relays with changeover contact are available.

The adjustable parameters and alarm thresholds enable a very flexible use in the gas measuring technique. Simple and comfortable commissioning is granted by the factory-set parameters.

Configuration, parameterization and operation is easy to do without programming knowledge due to the logical, simple menu structure.

The gas controller DGC-05 is equipded with a self monitoring system, with power fail message as well as with a functional control of the registered DT-05 and AT transmitters.

The serial interface permits to load and store the application parameters.

In addition the gas controller is available with emergency power supply.

APPLICATION

The DGC-05 gas controller is used for the monitoring and warning of toxic and combustible gases as well as Freon refrigerants within a wide range of gas measurement technique. Numerous adjustable parameters and set-points permit individual adaptation to many applications.

The DGC-05 gas controller fulfils the functions of monitoring Carbon monoxide (CO) in garages and tunnels etc. according to VDI 2053 and ÖNORM. Additionally ammonia (NH₃)- refrigerant plants can be monitored according to the requirements EN 378, VBG 20 and the guidelines "safety requirements for ammonia refrigeration systems".
